

# SODA ASH

## Product Information

### Description

**Soda Ash** is a white, granular powder used to soften and condition make-up water and raise pH. By softening the water, **Soda Ash** helps maximize the performance of the bentonite or polymer and speed up hydration reducing mixing times.

### Characteristics

- Appearance: White to Tan Colored Powder
- pH: 11.5 in 5% solution
- Bulk Density: 57 – 65 lb/ft<sup>3</sup>

### Application

Check hardness and pH levels prior to the addition of **Soda Ash**. Add **Soda Ash** prior to the addition of bentonite or polymer product. Use 1/4 to 1/2 pound per 100 gallons of make-up water. When treating make-up water, pH levels between 8.0 and 9.0 should be established and maintained.

### Packaging

**Soda Ash** is available in 50 pound multi-walled paper bags.
