

WYO-DEFOAMER™

Product Information

Description

WYO-DEFOAMER™ is designed to act as both a system and contact defoaming agent in drilling applications. It can be used mineral exploration, HDD, water well, and seismic drilling operations. The highly concentrated formula of **WYO-DEFOAMER™** when mixed with water readily breaks down foam generated from air drilling operations and water-based drilling fluids.

Characteristics

- Breaks down surface foam
- Works as an “anti-foamer” in the fluid system
- Easily mixes with water

Application

- Mix 1 part WYO-DEFOAMER™ with 5 parts water.
- For contact application on produced foam, using a pump sprayer, mist the mixture over the surface of the foam to break the bubbles.
- As a system anti-foamer, inject or trickle the diluted mixture or the WYO-DEFOAMER™ concentrate into the mud pit at the flow line to reduce or prevent entrained air in the mud system.
- The application rate will vary based on the foaming agent concentration in the produced foam or fluid system.

Mix well before using.

Packaging

WYO-DEFOAMER™ is packaged in 42# (5-gallon) plastic containers.
